GORINOVA (Mme Y. V.). Способ борьбы с паршой Яблони. [A method of controlling Apple scab.]—Сад и Огород [*Orchard & Garden*], *1953*, 5, p. 77. 1953.

At the Pan-Soviet Scientific Research Institute of Plant Protection, U.S.S.R., from 1950 to 1952 apple scab [*Venturia inaequalis*: *R.A.M.*, 32, p. 133] was controlled by spraying fallen leaves with 0·5 per cent. selinon or 2 per cent. preparation 47 and the trees with copper sulphate followed by two or three supplementary sprays with Bordeaux mixture in early spring when the perithecia were ripe. Leaf and fruit infection, respectively, were reduced 2·5 and 7 to 10 times on severely affected Reinette Simirenko and Paper Reinette varieties.

TITLE: Inertial phase discriminators

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika, no. 6, 1962, abstract 6-2-37 1 (Tr. Vses. zaochn. energ. in-ta, no. 18, 1961, 61-76)

TEXT: The operation of an inertial phase discriminator for use in automatic target-tracking radar system is analyzed. Relations needed for the design of the circuit parameters are established. It is shown that inertial phase discriminators have a larger voltage-transfer constant than inertialess phase discriminators. It is pointed out that, owing to the poorer noise immunity and accuracy of inertial phase discriminators in comparison with inertialess ones, they can be used only in a limited number of automatic and electronic equipment circuits. 3 figures and 3 references. PURPOSE: This collection of articles was published in order to acquaint the public with the work of students of the Leningrad Communications' Institute imeni M.A. Bonch-Bruyevich. The articles may also be useful to communication technicians.

COVERAGE: The papers presented at the 1958 conference of the Scientific Student Society of the Institute concerned such new problems as electronic automatic telephone exchanges, electronic computers, colored television, and electronic telegraph. This collection contains 12 articles which were selected from the 90 papers submitted at the conference. No personalities are mentioned. References accompany most of the articles.

AUTHORS: Zayezdnyy, A. M., Gorinshteyn, A. M.

TITLE: The use of the method of generalized summation of series in constructing communication channels

PERIODICAL: Referativnyy zhurnal, Matematika, no. 7, 1962, 57, abstract 7V250. ("Issled. po sovrem. probl. konstruktivn. teorii funktsiy", M., Fizmatgiz, 1961, 353-358)

TEXT: If at the entrance of a linear filter there appears the signal $A_1(\omega) \sin [\omega t + \Psi_1(\omega)]$, then there appears at the output the answer $A_2(\omega) \sin [\omega t + \Psi_2(\omega)]$, where $K(\omega) = \frac{A_2(\omega)}{A_1(\omega)}$, $\varphi(\omega) = \Psi_2(\omega) - \Psi_1(\omega)$ are the amplitude and phase characteristics of the filter. If the input signal is not harmonic and if its spectral density outside the finite frequency range $[\omega_1, \omega_2]$ is equal to zero, then -- in the absence of frequency distortions -- it is required that $K(\omega) = \text{const.}$, $\varphi(\omega) = -\omega t_d$, $\omega_1 \leq \omega \leq \omega_2$, $t_d = \text{const.}$ Let $K(\omega) \equiv 0$ for $0 \leq \omega < \omega_{max}$, $\varphi(\omega) = -\omega t_d$. Let a periodic sequence of rectangular

Card 1/2

The use of the method of generalized ... impulses having a duration equal to the half period $T = \frac{2\pi}{\Omega}$ appear at the entrance to the filter. Then the output signal is

$$q(t) = K(0)\left[{}^1/_2 + {}^2/_\pi \sum_{n=1}^{1/2(N+1)} \frac{K[(2n-1)\Omega]}{K(0)} \times \sin(2n-1)(t-t_d)\Omega, \right. \quad (1)$$

where N is proportional to ω_{max}/Ω. If $K(\omega)$ = const. is chosen, then the plane portion of the impulse is distorted because of the Gibbs phenomenon, whereby this distortion does not become smaller if ω_{max} increases. The problem arises: What form must $K(\omega)$ have so that the diminution of the distortion of the plane portion can be carried out without distorting the form to any extent. The authors suggest that known methods of generalized series summation be used to solve this problem, whereby the peaks are smoothed out. Given are illustrations of the impulse form which using concrete methods on the series (1).

TITLE: Numerical calculation of transients in lines working between active resistances

CITED SOURCE: Sb. Resheniye inzh. zadach na elektron. vy*chisl. mashinakh. L., 1963, 145-158

TOPIC TAGS: transient numerical calculation, active internal resistance, operational method, factorization theorem, residue theorem, characteristic number, transcendental equation complex root

TRANSLATION: The author explains the calculation of transients in lines working between two active resistances (an active load is fed through the line from the generator with an active internal resistance). The operational method is used with the application of the factorization theorem (the theorem of residues). Finding

Card 1/2

ACCESSION NR: AR4039305

the characteristic numbers (poles of the images of the transients) reduces to calculating the complex roots of the transcendental equations. The solution to the problem is put together from the following steps: the distribution of the characteristic numbers on the complex plane is computed; an algorithm for computing the characteristic numbers is constructed; formulas, which determine the solution, are introduced; for specific values for the parameters of the line and for the loads, characteristic numbers are calculated, upon which the solution depends. Particular attention is given to calculating characteristic numbers. 6 titles in bibliography. J. Shelikhova.

TITLE: Numerical harmonic analysis of functions with discontinuous spectra

SOURCE: Ref. zh. Fizika, Abs. 11Zh18

REF SOURCE: Tr. Nauchno-tekhn. konferentsii Leningr. elektrotekhn. in-ta svyazi, vyp. 1, 1964, 107-112

TOPIC TAGS: numeric analysis, harmonic analysis, spectral analysis, calculation

ABSTRACT: A phenomenon similar to the well known Gibbs phenomenon in the synthesis of discontinuous time functions arises in the numerical calculation of discontinuous spectra, namely, it is impossible to duplicate the discontinuities with accuracy better than 9% when the Fourier integrals are calculated directly. A method is described for the calculation of discontinuous spectra, in which provision is made for using the Bernstein-Rogosinski generalized summation method. Recommendations are made with regard to devising a computation procedure in which spectral discontinuities can be duplicated with arbitrary prescribed accuracy. [Translation of abstract]

TITLE: Hydraton Antifiltration Linings and Membranes

PERIODICAL: Gidrotekhnika i melioratsiya, 1959, Nr 9, p 61 (USSR)

ABSTRACT: This is a review of the German-language journal"Wasser-wirtschaft-Wassertechnik", 1959, Nr 5. The author states that filtration of water through dams and other hydrotechnical structure can be prevented by applying of physico-chemical methods consisting of introduction of waterproof layers made of hydraton - a mixture of earth, clay and a number of chemical compositions. Hydraton was for the first time applied on a water storage basin in Kranzel, GDR. No other materials serving to prevent water infiltration can compete with it in respect of the cost.

Some data on the toxicological analysis of pyrethrum. V. B. Ieacher.ko and O. V. Goritskaya. *Bull. Plant Protection* (U. S. S. R.) 3, No. 1, 165–74(1931).—Expts. with (1) *Pyrethrum cinerariaefolium* from Yalta (Crimea), (2) a mixt. of *Pyrethrum roseum* and *Pyrethrum carneum* (wild flowers) from Caucasus, and (3) a mixt. of (2) grown in the exptl. stations in the vicinity of Petrograd and Mogilev were carried out with powders, exts. and mixts. of various strengths and their action was compared with that of other insecticides. A furfurol ext. gave satisfactory results. It was found that *Pyrethrum cinerariaefolium* is much more toxic than *Pyrethrum carneum* and *roseum*. The two last species were more toxic when grown in Transcaucasia than when grown in the north. The expts. are described and the effects of various insecticides are plotted.
